

# F100364 Low Power 16-Input Multiplexer

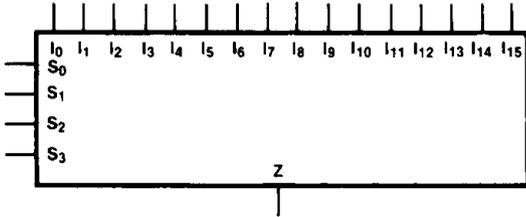

## General Description

The F100364 is a 16-input multiplexer. Data paths are controlled by four Select lines ( $S_0-S_3$ ). Their decoding is shown in the truth table. Output data polarity is the same as the selected input data. All inputs have 50 k $\Omega$  pulldown resistors.

## Features

- 35% power reduction of the F100164
- 2000V ESD protection
- Pin/function compatible with F100164
- Voltage compensated operating range = -4.2V to -5.7V

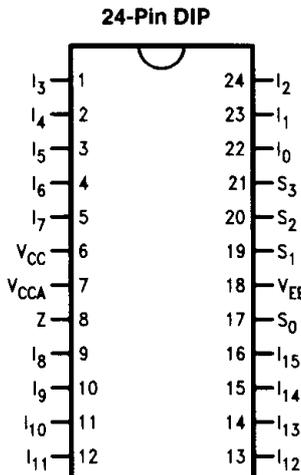

## Logic Symbol

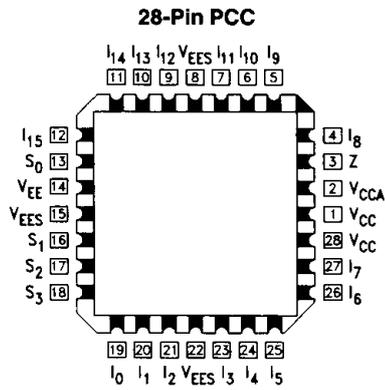

TL/F/10265-1

| Pin Names    | Description   |
|--------------|---------------|
| $I_0-I_{15}$ | Data Inputs   |
| $S_0-S_3$    | Select Inputs |
| Z            | Data Output   |

H = HIGH Voltage Level  
L = LOW Voltage Level

## Absolute Maximum Ratings

Above which the useful life may be impaired (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

|  |                   |
|--|-------------------|
| Storage Temperature ( $T_{STG}$ )        | -65°C to +150°C   |
| Maximum Junction Temperature ( $T_J$ )   |                   |
| Ceramic                                  | +175°C            |
| Plastic                                  | +150°C            |
| Pin Potential to Ground Pin ( $V_{EE}$ ) | -7.0V to +0.5V    |
| Input Voltage (DC)                       | $V_{EE}$ to +0.5V |
| Output Current (DC Output HIGH)          | -50 mA            |
| ESD (Note 2)                             | ≤ 2000V           |

## Recommended Operating Conditions

|                             |                 |
|-----------------------------|-----------------|
| Case Temperature ( $T_C$ )  |                 |
| Commercial                  | 0°C to +85°C    |
| Military                    | -55°C to +125°C |
| Supply Voltage ( $V_{EE}$ ) |                 |
| Commercial                  | -5.7V to -4.2V  |
| Military                    | -5.7V to -4.2V  |

## Commercial Version

### DC Electrical Characteristics

$V_{EE} = -4.2V$  to  $-5.7V$ ,  $V_{CC} = V_{CCA} = GND$ ,  $T_C = 0^\circ C$  to  $+85^\circ C$  (Note 3)

| Symbol    | Parameter            | Min   | Typ   | Max   | Units | Conditions                                |                           |
|-----------|----------------------|-------|-------|-------|-------|---|---------------------------|
| $V_{OH}$  | Output HIGH Voltage  | -1025 | -955  | -870  | mV    | $V_{IN} = V_{IH}$ (Max) or $V_{IL}$ (Min) | Loading with 50Ω to -2.0V |
| $V_{OL}$  | Output LOW Voltage   | -1830 | -1705 | -1620 | mV    |   |                           |
| $V_{OHC}$ | Output HIGH Voltage  | -1035 |       |       | mV    | $V_{IN} = V_{IH}$ (Min) or $V_{IL}$ (Max) | Loading with 50Ω to -2.0V |
| $V_{OLC}$ | Output LOW Voltage   |       |       | -1610 | mV    |   |                           |
| $V_{IH}$  | Input HIGH Voltage   | -1165 |       | -870  | mV    | Guaranteed HIGH Signal for All Inputs     |                           |
| $V_{IL}$  | Input LOW Voltage    | -1830 |       | -1475 | mV    | Guaranteed LOW Signal for All Inputs      |                           |
| $I_{IL}$  | Input LOW Current    | 0.5   |       |       | μA    | $V_{IN} = V_{IL}$ (Min)                   |                           |
| $I_{IH}$  | Input HIGH Current   |       |       | 300   | μA    | $V_{IN} = V_{IH}$ (Max)                   |                           |
| $I_{EE}$  | Power Supply Current | -89   |       | -45   | mA    | Inputs Open                               |                           |

**Note 1:** Absolute maximum ratings are those values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

**Note 2:** ESD testing conforms to MIL-STD-883, Method 3015.

**Note 3:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operate under "worst case" conditions.

### Ceramic Dual-In-Line Package AC Electrical Characteristics

## Military Version—Preliminary (Continued)

### DC Electrical Characteristics

$V_{EE} = -4.2V$  to  $-5.7V$ ,  $V_{CC} = V_{CCA} = GND$ ,  $T_C = -55^\circ C$  to  $+125^\circ C$

| Symbol   | Parameter            | Min | Max | Units   | $T_C$                           | Conditions                                  | Notes   |
|----------|----------------------|-----|-----|---------|---------------------------------|---|---------|
| $I_{IH}$ | Input HIGH Current   |     | 300 | $\mu A$ | $0^\circ C$ to $+125^\circ C$   | $V_{EE} = -5.7V$<br>$V_{IN} = V_{IH} (Max)$ | 1, 2, 3 |
|          |                      |     | 450 | $\mu A$ | $-55^\circ C$                   |   |         |
| $I_{EE}$ | Power Supply Current | -95 | -35 | mA      | $-55^\circ C$ to $+125^\circ C$ | Inputs Open                                 | 1, 2, 3 |

**Note 1:** F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals  $-55^\circ C$ ), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.

**Note 2:** Screen tested 100% on each device at  $-55^\circ C$ ,  $+25^\circ C$ , and  $+125^\circ C$ , Subgroups, 1, 2, 3, 7 and 8.

**Note 3:** Sampled tested (Method 5005, Table I) on each manufactured lot at  $-55^\circ C$ ,  $+25^\circ C$ , and  $+125^\circ C$ , Subgroups A1, 2, 3, 7 and 8.

**Note 4:** Guaranteed by applying specified input condition and testing  $V_{OH}/V_{OL}$ .

**Note 1:** F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals  $-55^\circ C$ ), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.

**Note 2:** Screen tested 100% on each device at  $+25^\circ C$ , temperature only, Subgroup A9.

**Note 3:** Sample tested (Method 5005, Table I) on each Mfg. lot at  $+25^\circ C$ , Subgroup A9, and at  $+125^\circ C$ , and  $-55^\circ C$  temp., Subgroups A10 and A11.

**Note 4:** Not tested at  $+25^\circ C$ ,  $+125^\circ C$  and  $-55^\circ C$  temperature (design characterization data).

## Test Circuit

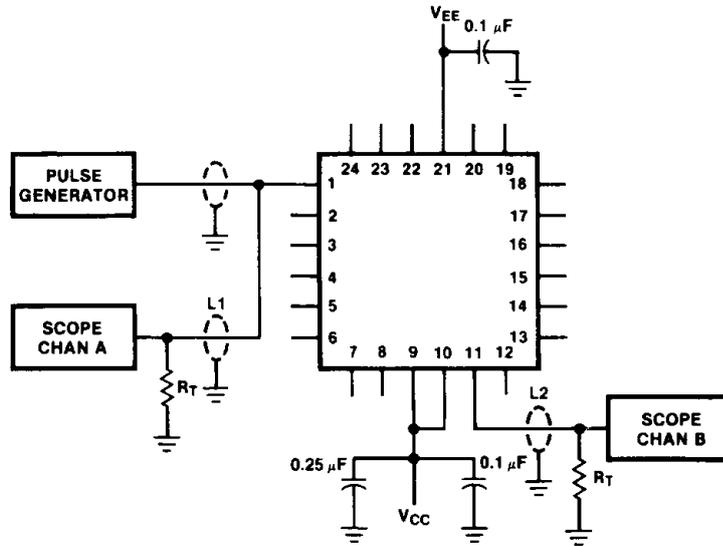

FIGURE 1. AC Test Circuit

TL/F/10265-6

## Switching Waveforms

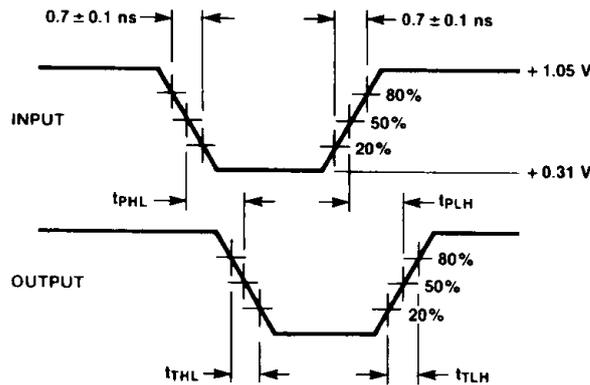

FIGURE 2. Propagation Delay and Transition Times

TL/F/10265-7

### Notes:

$V_{CC}, V_{CCA} = +2V, V_{EE} = -2.5V$

L1 and L2 = Equal length 50 $\Omega$  impedance lines

$R_T = 50\Omega$  terminator internal to scope

Decoupling 0.1  $\mu F$  from GND to  $V_{CC}$  and  $V_{EE}$

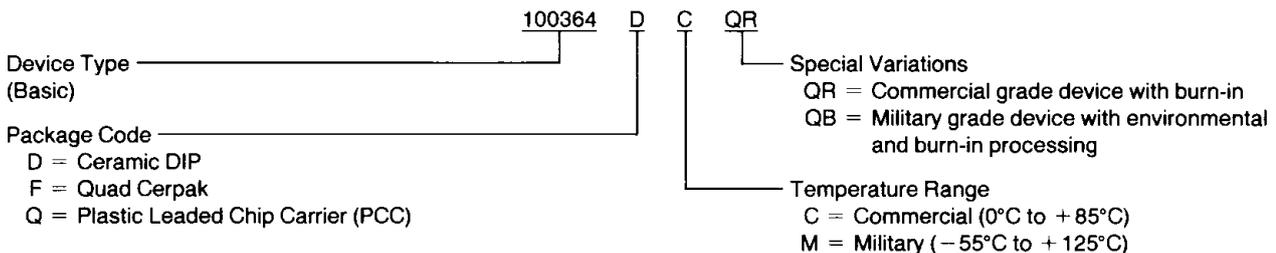

All unused outputs are loaded with 50 $\Omega$  to GND

$C_L =$  Fixture and stray capacitance  $\leq 3$  pF

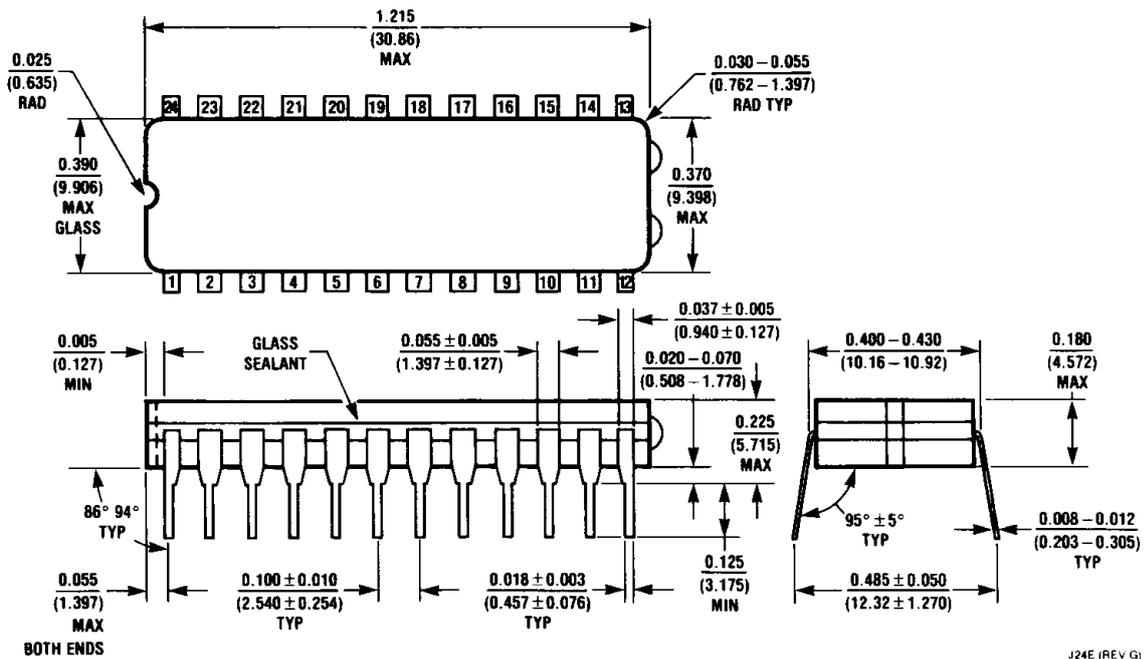

Pin numbers shown are for flatpak; for DIP see logic symbol

## Ordering Information

The device number is used to form part of a simplified purchasing code where a package type and temperature range are defined as follows:

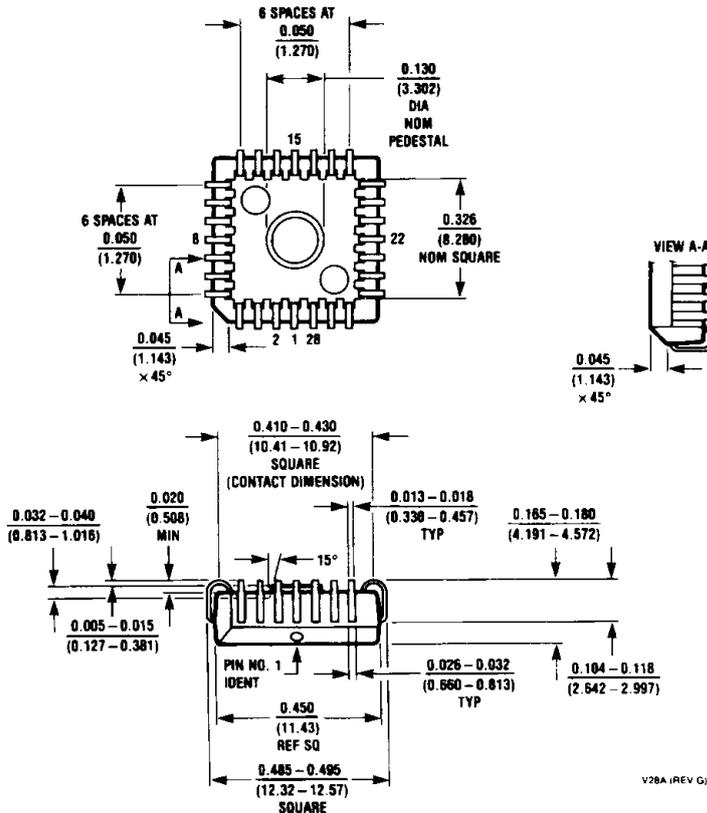

**Physical Dimensions** inches (millimeters)

**24-Lead Ceramic Dual-In-Line Package (0.400" Wide) (D)**  
NS Package Number J24E

J24E (REV G)

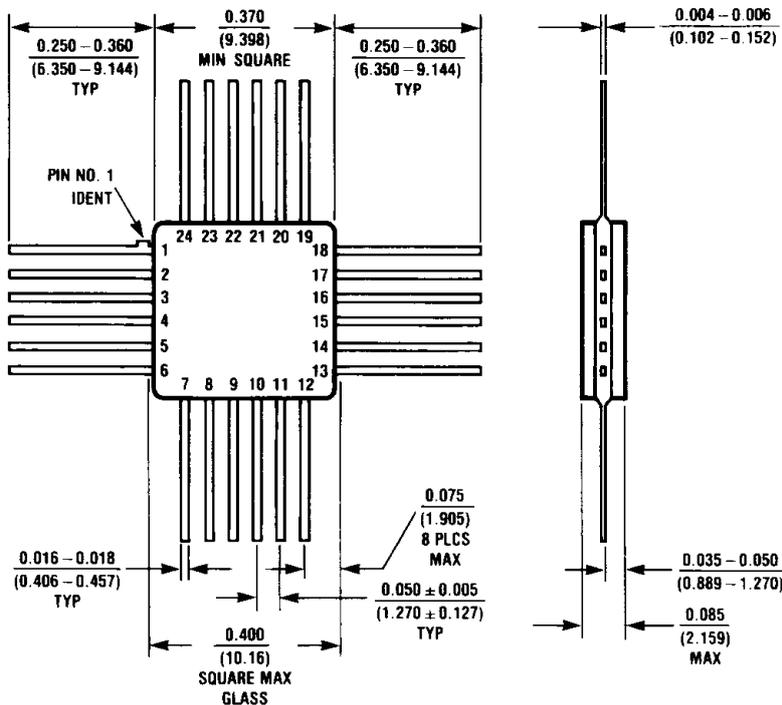

**28-Lead Plastic Chip Carrier (Q)**  
NS Package Number V28A

V28A (REV G)

**Note:** Pedestal as shown on base is not available for F100K ECL products.

**Physical Dimensions** inches (millimeters) (Continued)

Lit. # 114925

W24B (REV C)

**24-Lead Quad Cerpak (F)  
NS Package Number W24B**

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
