## High Frequency/Video Switch

### Features

- Wideband Operation ..... 200MHz
- Differential Gain ..... 0.03%
- Differential Phase ..... 0.003 Degrees
- Switching Speed ..... 100ns
- $r_{ON}$  ..... 35Ω
- Off Isolation at 10MHz ..... -65dB
- Crosstalk at 10MHz ..... -80dB

### Applications

- Routing Switchers
- Medical Imaging
- Production Mixers
- Heads-Up Displays
- High Definition TV
- Simulators
- Radar Signal Conditioning
- Sonar

### Related Literature

- HI-222/883 Data Sheet in 1989 Military Analog Data Book

### Description

The HI-222 is a high frequency analog switch that complements the Harris family of high speed op amps and buffers. Fabricated with our Dielectric Isolation process and using silicon gate technology, many key parameters have been enhanced.

Crosstalk and off isolation are optimized with a T-switch configuration and the use of nonconnected pins for extended shielding. Other features of the HI-222 include wideband operation, low  $r_{ON}$ , fast switching speeds and low differential gain and phase. The characteristics of this TTL compatible device make it ideal for designs where improved switching performance is required.

The primary application of this dual SPST switch is the routing of high frequency signals in equipment ranging from video production mixers to military RF circuits.

For specifications on HI-222/883, refer to Harris Military Analog Data book.

### Pinouts

HI-222 (CERDIP, PDIP) (LOGIC "1" INPUT)

### Part Number Information

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
HI4P0222-5	0 to 75	20 Ld PLCC	N20.35
HI1-0222-5	0 to 75	14 Ld CERDIP	F14.3
HI3-0222-5	0 to 75	14 Ld PDIP	E14.3

### Functional Diagram

NOTE: Source and Drain are arbitrarily depicted as Analog Input and Output, respectively. They may be interchanged without affecting performance. All nonconnected pins should be tied to ground.

# HI-222

## Absolute Maximum Ratings $T_A = 25^\circ\text{C}$

Supply Voltage (V+ to V-) (Terminals) . . . . .	36V
$\pm V_S$ to Ground (V+ to V-) . . . . .	$\pm 18\text{V}$
Digital Analog Input Voltage ( $V_A$ , $V_S$ , $V_D$ ) . . . . .	$\pm V_S \pm 2\text{V}$
$I_{PEAK}$ (S to D) (Pulse at 0.8ms, 10% Duty Cycle Max) . . . . .	100mA
$I_{PEAK}$ (Any Pin, 50% Duty Cycle) . . . . .	28mA
Continuous Current (Any Pin) . . . . .	15mA
ESD Rating . . . . .	<2000V

## Operating Conditions

Temperature Range, HI-222-5 . . . . .	$0^\circ\text{C}$ to $75^\circ\text{C}$
---------------------------------------	---

## Thermal Information

Thermal Resistance (Typical, Note 1)	$\theta_{JA}$ ( $^\circ\text{C}/\text{W}$ )	$\theta_{JC}$ ( $^\circ\text{C}/\text{W}$ )
CERDIP Package . . . . .	80	30
CLCC Package . . . . .	70	18
PDIP Package . . . . .	90	N/A
PLCC Package . . . . .	75	N/A
Maximum Junction Temperature (Hermetic Package) . . . . .	$175^\circ\text{C}$	
Maximum Junction Temperature (Plastic Package) . . . . .	$150^\circ\text{C}$	
Maximum Storage Temperature Range . . . . .	$-65^\circ\text{C}$ to $150^\circ\text{C}$	
Maximum Lead Temperature (Soldering 10s) . . . . .	$300^\circ\text{C}$ (PLCC - Lead Tips Only)	

*CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.*

### NOTE:

- $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

## Electrical Specifications $\pm V_S = \pm 15\text{V}$ , $V_{AH} = 2.0\text{V}$ , $V_{AL} = 0.8\text{V}$ , Unless Otherwise Specified

#### NOTES:

- As with all semiconductors, stresses listed under "Absolute Maximum Ratings" may be applied to devices (one at a time) without resulting in permanent damage. This is a stress rating only. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. The conditions listed under "Electrical Specifications" are the only conditions recommended for satisfactory operation.
- $V_{OUT} = \pm 5V$ ,  $I_{OUT} = 7.5mA$ .
- $V_{IN} = +5V$ ,  $R_L = 2k\Omega$ ,  $C_L = 40pF$ .  $V_A$  levels are 0.0V to 3.0V for switch under test. Switch not under test has  $V_A = 4.0V$ .
- $V_{IN} = 300mV_{P-P}$ ,  $R_L = 50\Omega$ ,  $V_{AH} = +2.0V$ ,  $V_{AL} = 0.8$ ,  $f = 10MHz$ .
- $V_{IN} = 300mV_{P-P}$ ,  $V_{OFFSET} = 1.0$ ,  $f = 3.58MHz$  and  $4.43MHz$ ,  $V_{AL} = 0.V$ ,  $R_L = 2k\Omega$ .
- $V_{IN} = 300mV_{P-P}$ ,  $R_L = 50\Omega$ ,  $V_{AL} = 0.8V$ .

### Test Circuits

$$V_O = V_{IN} \frac{R_L}{R_L + r_{ON}}$$

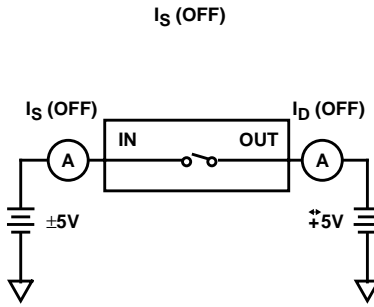

$C_L$  Includes  $C_{FIXTURE} + C_{PROBE}$
